PROFILE

Founding engineer at a US marketplace startup, with about two years of professional experience. I own the payments stack and the production infrastructure, built the messaging system and the live-shopping product end to end, and lead release engineering for a three-person team. My work sits where money, reliability and trust meet. Fully remote with US teams since January 2026. Arabic native, English C2, French C1.

EXPERIENCE

Founding Engineer

June 2026 – Present

Potluck · US live-shopping & home-baker marketplace

Fully remote

- **Built Potluck LIVE end to end** — the company's live-shopping product. Per-show public sign-up pages, phone-only one-field signup, a server-only token ledger (earn, spend, referrals, never negative), show scheduling, a pre-show console for chefs, live sign-up analytics, giveaways and an admin console. Shipped to production across six idempotent migrations and nine headless test suites.
- **Own the Stripe Connect payments stack** — checkout, transfers, payouts, webhooks and reconciliation. Built payout monitoring with alerts for failed and stuck payouts, and a daily reconciliation of the database against Stripe that classifies every mismatch by cause.
- **Hardened checkout** — an order is marked paid only after server-side verification against Stripe, with exactly-once inventory and validation that rejects client-sent prices, items no longer on sale and over-stock quantities. Covered by 14 attack tests.
- **Built the messaging system end to end** — PostgreSQL as system of record, server-mirrored to Firebase RTDB, clients read-only via tokens minted from the session with thread-membership claims. Per-order threads, system messages at order events, pre-purchase DMs and admin oversight, at **~750 ms cross-browser realtime latency**.
- **Stood up production infrastructure and the deploy pipeline from scratch** — Postgres with backups, scoped-IAM S3, TLS, push-to-main auto-deploy that asserts the new version is serving before running migrations, and a Playwright visual and accessibility suite behind a 25-check smoke test.
- **Performance** — self-hosted fonts and server-rendered the first feed image, eliminating **5.7–8.1 s of LCP load delay**.
- **Lead release engineering** — cut and ship releases, review PRs, set review conventions, split work across two engineers, run standups and onboard new engineers.

Next.js · TypeScript · Stripe Connect · Clerk · Firebase RTDB · PostgreSQL · AWS S3 · Playwright · Sentry · Linear

Software Engineer

January 2026 – June 2026

Offa.com · US real-estate marketplace (same founding team)

Fully remote

- Built and launched **Deal Grader** (grade.offa.com) — a public deal-scoring tool with live score updates, Google Places autocomplete, an interactive map of nearby off-market listings and shareable SEO-indexed report pages.
- Built **Spyder**, a multi-provider SMS and email platform (NestJS, Prisma, PostgreSQL, React): **14,000+ messages a week at 99.99% delivery reliability**, ~35% CRM dependency and ~20% delivery cost, with automated delivery-failure triage and provider failover.
- Replaced 30-second polling with WebSocket notifications; resolved cross-provider email deliverability issues; instrumented product analytics and session replay end to end.

Software Engineer — End-of-Studies Internship

February 2025 – August 2025

Pearls Consulting

Tunis, Tunisia

- Full-stack field-inspection platform (Laravel 12, React TypeScript, React Native). Built GitLab CI/CD pipelines deploying to Kubernetes, provisioned infrastructure with Terraform, and set up Prometheus and Grafana observability.

DevOps & Web Consultant (part-time, alongside studies)

July 2024 – January 2025

Pearls Consulting

Tunis, Tunisia

- Laravel deployments on DigitalOcean and Forge (**+30% uptime**); CI/CD automation cutting manual deploys by **60%**.

OPEN SOURCE

Payout Ledger

Live demo · github.com/JalelDridi/payout-ledger

- A payout monitor for marketplaces: idempotent Stripe webhook ingestion, a double-entry ledger that cannot go negative under concurrent writes, reconciliation against the provider, and alerts for failed and stuck payouts. About 100 tests, including concurrency and property-based ordering tests against real Postgres; eight written design decisions. Next.js, TypeScript, PostgreSQL, Prisma, Playwright.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, PHP, Python, Java, C, C#
Backend	Node.js, NestJS, Prisma, Laravel, REST, WebSockets, PostgreSQL, MySQL, MongoDB, Redis, Firebase
Frontend	React, Next.js, React Native, TailwindCSS
Cloud & DevOps	AWS (EC2, S3, SQS, CloudFront), Azure, Docker, Kubernetes, Terraform, Ansible, Helm, GitLab CI/CD, Jenkins, GitHub Actions
Payments	Stripe & Stripe Connect — checkout, transfers, payouts, webhooks, reconciliation
Observability & QA	Prometheus, Grafana, Sentry, PostHog, Amplitude, Playwright, Puppeteer

EDUCATION

Diplôme National d'Ingénieur en Informatique — ESPRIT, Tunis

Sep 2022 – Nov 2025

Specialisation: IT Architecture & Cloud Computing · Five-year engineering degree (bac+5) · Preparatory cycle, IPEI El Manar, 2020–2022

Leadership — President (2026), Vice-President (2024) and Secretary General (2022), JCI El Alia · Marketing Manager, Inceptum Junior Enterprise (ESPRIT)
